Project Design Phase
Proposed Solution Template

Date	3 October 2026
Team ID	SWTID-2026-3047
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution :

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employees need a simple and transparent way to request a standard laptop. Manual approval follow-up, task creation and Hardware assignment can delay processing and increase IT effort.
2.	Idea / Solution description	Use ServiceNow Service Catalog and Flow Designer to automate the workflow. After a Standard Laptop request is approved, Flow Designer automatically creates a Catalog Task, populates the required task details and assigns it to the Hardware assignment group.
3.	Novelty / Uniqueness	The solution connects approval, task creation and Hardware assignment into one automated ServiceNow workflow, reducing manual intervention and standardizing the procurement process.
4.	Social Impact / Customer Satisfaction	Provides employees with a simpler and more transparent request process while reducing waiting time, manual follow-up and inconsistent task handling for the IT/Hardware team.
5.	Business Model (Revenue Model)	The solution is intended for internal IT procurement automation. It does not require a separate revenue model; value is generated through reduced manual effort and improved operational efficiency.
6.	Scalability of the Solution	The ServiceNow cloud-based workflow can support multiple employees and laptop requests. The same Flow Designer approach can be extended to other standard IT equipment and procurement workflows.
